Application/Control Number: 10/762,860

Art Unit: 3729

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goergen

Patent No. 6,812,803 B2 Goergen teaches a laminated core having plated copper on both of its sides with one side being a ground plane. (Cf. Col 18).. Two power cores are prepared (Cf Col 19) and are laminated.. Each power core is plated.. A backplane panel is formed by stacking and aligning the copper-plated cores. (Cf, Col 20) After a material stack is cooled, through holes are drilled in the backplane and the entire assemble is plated with copper. (Cf. Col 20), That is to say at least to the uninitiated readers hereof that internal layers of a printed circuit board exist (Cf. Claim 2) It is old in this art to use a plating bar (Cf. Claim 1) to plate a conductive path is provided Moreover at least in Figure 23 one will note that the conductive paths extend to an outer edge of a circuit board and that the conductive paths are isolated. As applied to Claim 5 it is mere design choice to provide a trace that is from a high speed transmission line. In fact the entire Goergian document speaks to high speed digital communication systems such as routers and transmission (Cf. Col. 1). The limitations recited in claim 6 is also mere design choice. Applicants do not state any specific purpose or solve and specific problem thereby. Moreover the skill in this art is such that it would have been within the ordinary skill of an artisan to drill said hole and/or plate high transmission

Application/Control Number: 10/762,860

Art Unit: 3729

lines. As applied to Claim 8 the reader is referred to at least Fig 2 which clearly no single conductive path in an area between contacts of a PCB and a edge of the PCB.

Claims 9-14 are held to be allowable.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. J. Arbes whose telephone number is 571-272-4563. The examiner can normally be reached on M, T, R, and F from 8 to 6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, P. Vo, can be reached on 571-272-4690. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
